

SOLUTION OF WORLDWIDE SALES NETWORK

Company Profile

- 1976 Metal processing department established on Mar. 1st.
- 1989 Produce over 1800 sets of knee-type milling machine monthly.
- 1992 Machining center R&D department established.
- 1994 Launch first vertical machining center MCV-610 to Asia and Europe market.
- 2005 Shanghai branch factory officially established.
- 2007 Started constructing China manufacture & production headquarters.
Launch FG series double column machining center and start the production.
- 2008 Cooperate with Japan YASUNAGA corporation to develop and release the first horizontal machining center HT series to market.
- 2009 Invest in the technical cooperation with Italian 5ax maker on moving column and gantry type 5ax machining centers.
- 2010 Cooperate with Japan well-known machining center maker SNK.
- 2012 Produce 250 sets of Vertical tapping center monthly.
- 2016 Develop 5ax Moving column machining center HORNET series to market.
- 2018 Launch the first moving gantry type 5ax machining center TWISTER series to the market.

Twinhorn

VH-850L3 SERIES

- X axis is supported by 6 pcs of sliding pads along the linear guide way.
- X / Y / Z axis linear guide way width 30 / 35 / 45 mm
- X / Y / Z axis driven by powerful servo motor and with rapid federate 30 / 30 / 24 M/min (VH-850L : 30 / 30 / 20 M/min)
- Rigid and reinforced one-piece iron casting base design with oil/water separation function.
- Quality checked by ISO-230 rule.

High Speed High Efficiency Machining Center

High-precision, large-span linear guide way design on the base creates superior performance on the fast movement, high rigidity and accurate positioning.

Cleaning and maintenance job will be done easily through the wide-open side windows.

Built-in type operational box with 120° adjustable rotary arm.

Perfect Configuration

The structure of the machine base features high-rigidity and uniform distribution of the mechanics. With horizontal heavy structure design, it forms a stable space to ensure the mechanical accuracy not to be affected by changing the level of the foundation and to carry out the excellent performance when the machine runs at high speed.

VH structure

- For VH linear guide way series, the Z axis designed without counterweight provides extremely smooth response during rapid traverse and cutting operation. Short distance between the head stock and column offsets the affect of gravity and gives less deformation.

- Reversed "Y" -shaped column with extra large span gives super strong rigidity.
- Light and high-rigidity structure supports the spindle head standing upright with less deformation.

- High precision linear guide way provides high speed axis feed rate and cutting speed for light cutting materials.

Efficiency-Rigidity Spindle

Inspection

Spindle run-out check

Vertical straightness of Y&Z axis

Laser test

Ball bar test

Cutting test

Belt type spindle

- Using 4 pcs of P4 class precision angular ball bearings to increase axial and radial loads in a large span arrangement.
- The special air curtain design gives good ability of dustproof and waterproof on the spindle.
- With the advanced floating cylinder device, when the tool is unclamped, the bearing is free from the gravity to ensure the long-term accuracy of the spindle bearing.
- Standard speed 8000 rpm transmitted by new type belt with less noise.
(option 10000 / 12000 rpm)

Perfect Configuration

APC High-capacity automatic pallet changer system

MODEL : VH-850L3+APC

- The APC system effectively improves the production through saving the preparation time and continuing the working process without interruption.
- The two pallets exchanged by the way of parallel displacement. The maximum positioning error is less than 0.015 mm.

Powerful chip flush nozzle (Opt.)

- Coolant nozzles arranged on both sides of the splash guard to achieve good chip removing during the processing and to ensure the working area is clean.

Chain type chip conveyor (Opt.)

- Efficiently remove chips with less labor.
- Easy to transport, clean, and maintain.

Arm type ATC system 24T

- Quick tool change mechanism improves processing efficiency .
- Prevent the dust and coolant from sticking on the tool holder.

| | |
|--------------------|----------------|
| Tool capacity | 24 Tools |
| Type of magazine | Disc type |
| Max. tool diameter | 80 mm / 125 mm |
| Max. tool weight | 7 kg |
| Max. tool length | 300 mm |

Axis servo motor

Enclosed telescopic cover on the rail

- Well-protection on the sliding rail stops the coolant and chips break-in and extend the machine life.

VH series solutions

DD Rotary Table (Opt.)

DDR260

- Mechanical structure designed with wormless transmission system that has no-wear no-backlash characteristics.
- The direct drive system has the advantage of reacting fast and swift, and being maintained easily.
- The best choice for the fourth axis rotary table, fulfill the composite machining process which requests fast, precise and diverse productivity.

Specification

| | |
|------------------------|---------|
| Max. rotary speed | 200 rpm |
| 0~180° rotation time | 0.3 sec |
| Repeatability accuracy | ±10 sec |

Measuring System (Opt.)

- A In-time workpiece measurement in process: help to reduce the production defect rate and improve the production efficiency.
- B Tool measurement in process: help to accurately feedback the tool damage data and correct the error then to upgrade the machining accuracy and processing quality.
- C Available to work with contact or non-contact laser detection system to give a total solution with superior machining accuracy.

 ※L : X/Y axis linear guide way. L3: X/Y/ Z axis linear guide way.

Standard Accessory

1. Arm type tool changer system 24T
2. Coolant pump
3. Auto lubrication system
4. Working light
5. Tool box and tools
6. Floating tool clamping / unclamping system
7. Fully splash guard
8. Spindle air blast
9. Workpiece air blast
10. RS-232 interface
11. Rigid tapping
12. Auto power off system (M30)
13. Leveling bolts and pads
14. Heat exchanger for electrical cabinet

Optional accessory

1. Spindle oil cooler
2. Built-in spindle
12000 / 15000 rpm
3. Belt type spindle
10000 / 12000 rpm
4. Coolant through spindle, CTS
5. Powerful chip flush nozzle
6. Coolant ring
7. X/Y/Z axis roller type linear guide way
8. 4th axis rotary table
9. Screw type chip conveyor
10. Chain type chip conveyor
11. Auto pallet changer, APC
12. Transformer

Controller

1. Fanuc OIMF
2. Mitsubishi M80
3. Siemens 828D / 840D SL
